No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                  (without alignments)

APPLICANT: Yu, Xue-Jie
TITLE OF INVENTION: 28-kDa Immunoreactive Protein Gene of Ehrlichia TITLE OF INVENTION: canis and Uses Thereof
FILE REFERENCE: D6152
CURRENT APPLICATION NUMBER: US/09/201,458A
CURRENT PILING DATE: 1998-11-30
NUMBER OF SEQ ID NOS: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

Patent No. 6617156

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 032796-032
CURRENT APPLICATION NUMBER: US/09/134,000C
CURRENT PILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/055,778
PRIOR APPLICATION NUMBER: US 60/055,778
PRIOR FILING DATE: 1997-08-15
NUMBER OF SEQ ID NOS: 6812
SOFTWARE: PATENTIN VERSION 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting B. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAU96100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant homologous 28 kilodalton immunodominant protein from Ehrlichia canis, useful for treating Ehrlichia canis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 100.0%; Score 1462; DB 5; Length 280; Best Local Similarity 100.0%; Pred. The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeenis. This sequence represents an Ehrlichia outer membrane protein of the
                                                                                                                                    120

The invention relates to an isolated polynuclectide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigiant fragment of the E. canis P30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present sequence represents an E. canis outer membrane protein.
                                                                                                                                                                                                           240
                                                                   120
                                                                                                     120
                                                                                                                                                                                                                                            240

proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia canis P30F protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides isolated outer membrane proteins (OMP) from braining chafeensis and E. canis. The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel outer membrane proteins from Ehrlichia chaffeensis and Ehrlichia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting E. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAUS6100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention. (Updated on 07-AUG-2003 to correct OS field.)

useful as a vaccine against Ehrlichia chaffeensis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated and purified 28-kDa outer membrane proteins (P28-1 to P28-21) of Bhrlichia chaffeensis. P28 proteins are encoded by a 28kDa outer membrane protein multigene family. P28 proteins are useful as a vaccine against E.chaffeensis. DNA encoding P28 is useful for transfecting a host cell. AAU73400-AAU7340 represent Bhrlichia chaffeensis P28 outer membrane proteins of the invention

The invention relates to an isolated polynuclectide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichicals or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis. This sequence represents an Ehrlichia outer membrane protein of the
                                                                177
                                                                                                                                 180

```
The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the B. canis b30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding, nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypebtides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (RRocky mountain spotted fever) or canine ehrlichiosis. The present sequence represents an E. chaffeensis outer membrane protein.
                                                                                                                                                                                        outer membrane protein; circulating leukocyte; monocytic ehrlichiosis; Rocky Mountian spotted fever; canine ehrlichiosis; antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide encoding outer membrane protein P30 of Ehrlichia canis or its variant or fragment, useful for producing Ehrlichia canis or Ehrlichia chaffeensis outer membrane proteins for diagnosing and treating ehrlichiosis.
                                                                                                                                                     E. chaffeensis outer membrane protein OMP-1B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia chaffeensis OMP protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting E. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAUS6100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                             Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant homologous 28 kilodalton immunodominant protein from Ehrlichia canis, useful for treating Ehrlichia canis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 5; Length 281;

The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Bhrlichia canis or Bhrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis.
                                                                                                                          LMVNTCYDITAEGVSFVPYACAGIGADLITIFKDLNLKFAYQGKIGISYPITPEVSAFIG 230

P28 proteins are encoded by a 28kDa outer membrane protein multigene family. P28 proteins are useful as a vaccine against E.chaffeensis. DNA encoding P28 is useful for transfecting a host cell. AAU73400-AAU73420 represent Ehrlichia chaffeensis P28 outer membrane proteins of the invention
                                                                                                 114

The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMF) of Ehrlichia canis or Ehrlichia chaffeensis used in the disgnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be disgnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis.
                                                                                                                                                                                                                                                                             Isolated polynucleotide encoding an outer membrane protein of E.canis or E.chaffeensis used in the diagnosis of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   outer membrane protein, circulating leukocyte, monocytic ehrlichiosis; Rocky Mountian spotted fever; canine ehrlichiosis; antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents an Ehrlichia outer membrane protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (1), of Ehrlichia canis. (1), a 28 kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting E. canis infection in a subject. (1) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAU95100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention
                                                                                                                                                                                                                                                                             Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant homologous 28 kilodalton immunodominant protein from Ehrlichia canis, useful for treating Ehrlichia canis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 280;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Outer membrane protein; OMP; P30F; ehrlichiosis; infection.

                                                                            The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (RRCKY mountain spotted fever) or canine ehrlichiosis. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis, useful in preparing a composition for

                                                  The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia canis P30F protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides isolated outer membrane proteins (OMP) from Ehrlichia chafeensis and B. canis. The B. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1, -1(B to Z) shown in AAY06943-958. The B. canis proteins form part of the P30 family and consist of of proteins shown in AAY06959-970. The proteins and genes are used to detect B. chaffeensis in patients and B. canis in dogs. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel outer membrane proteins from Ehrlichia chaffeensis and Ehrlichia
                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to isolated and purified 28-kDa outer membrane proteins (P28-1 to P28-21) of Ehrlichia chaffeensis. P28 proteins are encoded by a 28kDa outer membrane protein multigene family. P28 proteins are useful as a vaccine against E.chaffeensis. DNA encoding P28 is useful for transfecting a host cell. ABU73400-AAU73420 represent Ehrlichia chaffeensis P28 outer membrane proteins of the invention
                                                                                                                                                                                                                                                   Novel Ehrlichia chaffeensis 28-kDa outer membrane protein, designated P28
useful as a vaccine against Ehrlichia chaffeensis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                isolated polynucleotide encoding an outer membrane protein of E.chaffeensis used in the diagnosis of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Outer membrane protein; OMP; P30F; ehrlichiosis; infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting B. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAU96100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                         Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial.

in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis. This sequence represents an Ehrlichia outer membrane protein of the

                                                                                                                                                                                            셤
```

The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding nucleotide outer membrane protein E. chaffeensis outer membrane protein for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polympeptides encoded by the polymucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present Ehrlichia canis or its variant or fragment, useful for producing Ehrlichia canis or Ehrlichia chaffeensis outer membrane proteins for sequence represents an E. chaffeensis outer membrane protein. diagnosing and treating ehrlichiosis. Disclosure; Fig 4; 105pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polynucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia chaffeensis OMP protein.

provide for expression of a polynucleotide encoding a polypeptide from a microbter functional in a plant cell, where the promoter is positioned to prowide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property comprises transforming a plant with the having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the recombinant DNA construct is useful for improving plant with the improved plant properties, e.g. improved cold, heat or drought tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of protectin yield and/or content, improved lignin production of carbohydrate, nitrogen or providing improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular or proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway confidentifying a gene required for cellular proliferation or the biological pathway in which a proliferation creduired gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent
                                                                                                                             ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid comprising any one of

to which each of the strains is present in a culture or collection of brains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational for divergence of the programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to Enterococcus faecalis polynuclectides and polypeptides. The invention also relates to a recombinant expression vector comprising a polynuclectide operably linked to a transcription regulatory element, a cell comprising a recombinant vector, a method for producing an E. faecalis polypeptide, an isolated nucleic acid comprising as equence not given in the specification, a recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for represents an E. faecalis polypeptide of the invention. This sequence represents an E. faecalis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid comprising a sequence encoding an Enterococcus fecalis polypeptide, useful for preparing a composition for diagnosing or treating E. fecalis infection.
                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Enterococcus faecalis infection; transcription regulatory element;

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense concludes acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the artisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for proliferation, (7) identifying a gene required for cellular proliferation or the biological pathway required for proliferation. The influence of the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, acts; (9) manufacturing an antibiotic; (12) determining the extent or to which each of the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for

identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                     Query Match
